

**STRACKER**  
SOLAR

# Maximum solar energy with the smallest footprint

- THE STATE-OF-THE-ART STRACKERS DELIVER 50-70% MORE SOLAR POWER THAN ROOFTOP INSTALLATIONS OF THE SAME SIZE

## Elevated dual-axis solar tracking

- Reduces energy costs and builds energy independence
- Requires no roof preparation, leak repair or reroofing issues
- Allows continued use of grounds below and offers extra shade
- Is battery ready for dependable electricity regardless of the grid
- Adds property value with the most efficient PV platform available
- Makes a visual statement of owner's contribution to a more sustainable future

# Cutting-edge technology, unparalleled performance, innovative design

## Solid & reliable

Robust all-steel structure with 120 mph wind rating  
Low maintenance all-electric dual-axis tracking  
30-year structural warranty  
Patent-pending, UL 3703 listed

## Most efficient PV platform available

Elevated dual-axis solar tracking delivers up to 70% greater energy harvest, and lower carbon footprint, than traditional rooftop, carport or fixed ground-mounted systems of the same size.

## Elevated & compatible

Minimum 14 ft ground clearance - perfect for parking areas, picnic spots and open spaces  
Pole-mounting allows installation even on hilly and difficult sites  
Clean power without compromising land below

## Features & options

- Electric Vehicle Charge Stations
- LED pole lighting
- Microgrid & battery ready
- Remote monitoring & control
- No-hassle maintenance program
